

How many steps do you have left to secure your private customer information?

Introducing the GLBA Compliance Solution powered by Policy Commander™—the easy, automated way to secure customer information.

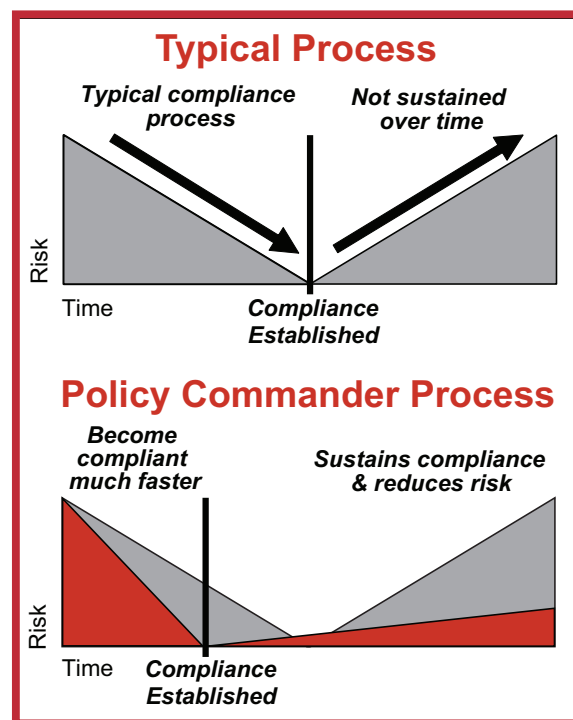

The threats to private customer information come from many directions, from either side of the firewall, from malicious hackers to unwitting insiders. But the GLBA Compliance Solution from New Boundary Technologies makes it easy to secure your computers and protect private customer information – continuously and automatically – no matter where the threats come from.

Keys to Compliance

To comply with the Gramm-Leach-Bliley Act, you have to continuously ensure the security of computers with access to private customer information. What you need is a solution that locks those computers down, continuously monitors them, and automatically maintains their security configurations. You need a solution that creates a flexible, self-sustaining IT security environment that protects customer information from external and insider threats. You need the GLBA Compliance Solution powered by Policy Commander.

Content and Control

Our solution starts with the *GLBA Security Guide* that gives you a head start in creating your GLBA

Information Security Program – a key step in the compliance process. Next, we deliver a comprehensive GLBA Security Policy Library of proven, enforceable security policies that includes the best practices recommendations from the National Institute of Standards and Technology (NIST). Our GLBA security policies are simple but powerful, giving you granular control over creating the specific security level you need for each computer. Finally, with a single mouse-click, Policy Commander constantly enforces the right security policies for each computer – and automatically keeps them configured to the security state you define. Policy Commander even helps you create or customize security policies with an integrated Policy Editor.

Key Benefits:

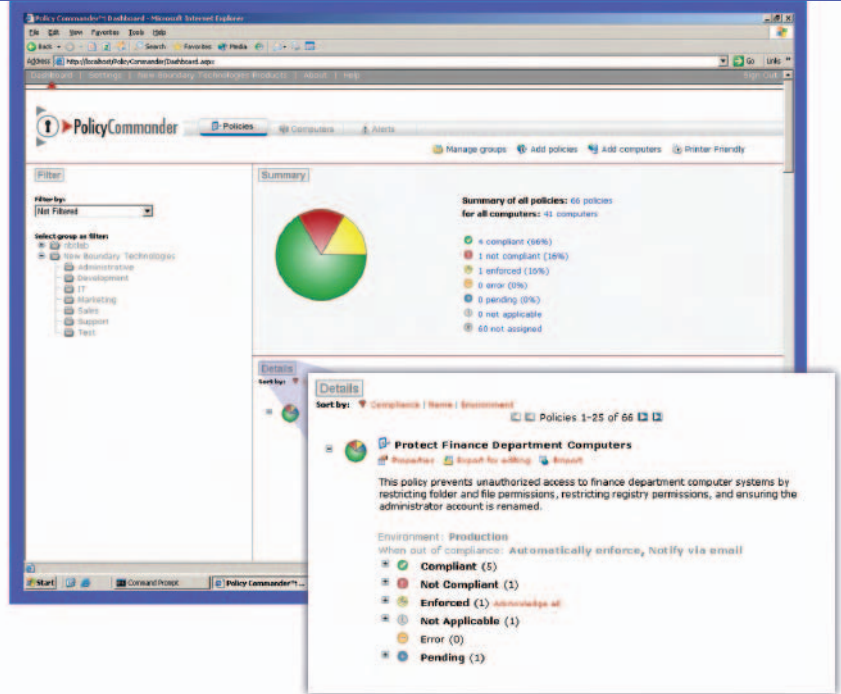

- **Ensure** compliance with GLBA Safeguards Rule requirements.
- **Continuously** secure computers and private customer information.
- **Demonstrate** continuous computer and information security enforcement to auditors.
- **Easily** establish and maintain secure computer configurations.
- **Enforce** security policies on remote and offline computers to assure continuous protection of private information.

Innovative Features:

- **GLBA Security Guide** provides a roadmap for creating your Information Security Program.
- **Comprehensive GLBA Security Policy Library** based on NIST best practices recommendations.
- **Continuous real-time monitoring** and enforcement of secure computer configurations.
- **Automated enforcement** of security policies – even on remote and disconnected computers.
- **Innovative policy format** targets the right policies for each computer.
- **Integrated Policy Editor** helps you create or customize security policies.

Ensure that your computers comply with critical GLBA security requirements — automatically.

Policy Commander delivers 24/7 enforcement of GLBA security policies.

Our GLBA Compliance Solution gives financial services IT professionals a proactive solution for managing and maintaining Safeguards Rule compliance. It provides security officers and executives with a real-time view of compliance status. It shows auditors that you have automated, continuous enforcement of your GLBA security settings and configurations. And Policy Commander is unique in its ability to continuously secure workstations and servers – and the data on them – so your private customer information is always protected against unauthorized access.

Comply with the security requirements of GLBA while establishing security best practices throughout your organization. **Learn more about the GLBA Compliance Solution powered by Policy Commander at www.policycommander.com, or call 1-800-747-4487 for more information.**
