

# To protect your business, you have to secure your cardholder information.

## Introducing the PCI Compliance Solution powered by Policy Commander™—the easy, automated way to secure cardholder information.

The Payment Card Industry (PCI) Data Security Standard is exacting and complex. With 12 top-level rules and 200 detailed sub-requirements, complying with the PCI Standard requires a major ongoing IT effort. And the penalties for non-compliance can range from huge fines to loss of payment card transaction privileges. But the PCI Compliance Solution from New Boundary Technologies cuts through the complexity, making it easy to secure your computers and protect cardholder account information – continuously and automatically.

### Continuous Compliance

The PCI Compliance Solution powered by Policy Commander gives you the tools you need to configure your systems for maximum security, and continuous compliance. It locks down computers with access to sensitive cardholder account information, continuously monitors those systems, and automatically maintains their secure configurations. And it creates a flexible, self-sustaining IT security environment that protects cardholder information from both external and internal threats and exploits.

### Comprehensive Control

Our solution starts with the *PCI Security Guide* that lays out the requirements of PCI compliance and provides best practices guidance for achieving each requirement. Then we provide a comprehensive PCI Security Policy Library of proven computer security policies, including recommendations from the National Institute of Standards and Technology (NIST). Our PCI security policies give you granular control over creating the specific security level you want for each computer. Finally, with a single mouse click, Policy Commander enforces the right policies for each computer — automatically. Policy Commander even helps you create or customize security policies with an integrated Policy Editor.

### Key Benefits:

- **Ensure** compliance with the PCI Data Security Standard.
- **Continuously** secure computers and private cardholder information.
- **Demonstrate** continuous computer and information security enforcement to auditors.
- **Easily** establish and maintain secure computer configurations.
- **Enforce** security policies on remote and offline computers to assure continuous protection of private information.

### Innovative Features:

- **PCI Security Guide** provides best practices guidance for Data Security Standard compliance.
- **Comprehensive PCI Security Policy Library** based on PCI requirements and NIST recommendations.
- **Automated, real-time monitoring** and enforcement of secure computer configurations.
- **Automated enforcement** of security policies – even on remote and disconnected computers.
- **Innovative policy format** targets the right policies for each computer.
- **Integrated Policy Editor** helps you create or customize security policies.

## Ensure that your computers comply with critical PCI security requirements — automatically.

### Policy Commander delivers 24/7 enforcement of PCI security policies.

Our PCI Compliance Solution gives IT professionals a proactive solution for managing and maintaining PCI Data Security Standard compliance. It provides security officers and executives with a real-time view of compliance status. It shows auditors that you have automated, continuous enforcement of your PCI security settings and configurations. And Policy Commander is unique in its ability to continuously secure workstations and servers – and the data on them – so your cardholder information is always protected against unauthorized access.

Comply with the security requirements of PCI while establishing security best practices throughout your organization. **Learn more about the PCI Compliance Solution powered by Policy Commander at [www.policycommander.com](http://www.policycommander.com), or call New Boundary Technologies at 1-800-747-4487 for more information.**
