

PRISM SUITE ARCHITECTURE

PRISM CONSOLE

Is used by administrators to manage computers, deploy tasks, scan hardware and software, and prepare reports.

CHANNEL SERVER

Is the center of Prism Suite operations. Manages communication between the console and clients via TCP/IP.

CLIENT

Monitors status and checks for tasks to invoke. Runs inside or outside the network, on both servers and workstations.

DATABASE SERVER

Stores information about computers, tasks, and inventories. Can use MS SQL Server or MSDE.
